

## Don't believe the "safe fracking" "safe track record" storyline

The Michigan DEQ and gas industry are in full spin mode, repeating the industry's lies about horizontal fracking --the insidious, massive industrialization that is about to invade Michigan--that have been sold to people around the country. Unless we can stop it.

### Setting the Record Straight

Dr. Chris Grobbel, a scientist who once worked for the DEQ and now in private consulting on contamination cases, gave a talk recently in the Irish Hills in which he debunks the entire DEQ fairy tale of their past "clean record." See Grobbel's power point presentation [Environmental Risks of Michigan Oil and Natural Gas Development](#). (Used with permission)

And a new documentary film is in the works that looks promising: "**Unearthed: The Fracking Facade.**" You will recognize the Michigan DEQ storyline in it.
