Hi Bob,

This is a request for approval to blend Marcellus Shale flowback solids. This is a new generator than we have previously seen. Page 35 of the analysis attached indicates Ra-226 is at 570pCi/g. With your permission we would like to receive this material and blend it according to the approved blending procedure that was submitted to you in January 14,2014. Please let me know if you have any questions.
